Internship Reference

Mr Lokesh Goud Dabbi completed an internship at the Johann Heinrich von Thünen Institute from 16 March 2026 to 15 June 2026. He was assigned to the Thünen Institute of Climate-Smart Agriculture.

As a federal research institute, the Johann Heinrich von Thünen Institute is an unincorporated institution under public law and an independent higher federal authority within the portfolio of the German Federal Ministry of Agriculture, Food and Regional Identity (BMLEH). As one of the 15 specialised institutes, the Thünen Institute of Climate-Smart Agriculture conducts research and policy advice on the topic of climate change mitigation measures in agriculture and is currently running the first iteration of the German Agricultural Soil Inventory (BZE-LW).

Mr Dabbi is completing his intership in the Regionalization and Data Science group lead by Dr. Florian Schneider, where he contributed to the EU project AI4SoilHealth (Grant Agreement No. 101086179), "Accelerating Collection and Use of Soil Health Information Using AI Technology to Support the Soil Deal for Europe and the EU Soil Observatory.

His responsibilities included:

- Assisting with the planning, logistics and onsite support of the AI4SoilHealth Consortium Meeting from 23rd to 25th of March 2026 in Braunschweig, Germany
- Conducting a multicountry study on the impact of historic landuse change on soil organic carbon along a pronounced climatic gradient (Spain, France, Germany – BadenWürttemberg, Sweden).
 - This involved historic land-use data collection for about 1000 sites of the European LUCAS-SOIL survey by systematic examination of digitized, georeferenced aerial photographs (1950 – present)
 - Using the open-source geographic information system QGIS to support the collection and processing of spatial data;
 - Integrating the historic landuse time series with published soil organic carbon measurements of the same LUCASSOIL sites, creating a unified dataset ready for statistical analysis
 - Developing reproducible analysis pipelines via the open-source programming

The Johann Heinrich von Thünen Institute, Federal Research Institute for Rural Areas, Forestry and Fisheries – Thünen Institute in brief – consists of 15 specialized institutes with socioeconomic, ecological and technological expertise. The Thünen Institute conducts research and policy advice related to rural areas, agriculture, forests and fisheries.

President: Prof. Dr. Birgit Kleinschmit

- language R using the packages tidyverse, terra and sf to support analyses
- Preparing publicationready figures, tables and descriptive statistics that quantify the relationship between landuse trajectories and soil organic carbon across the temperature gradient

Mr Dabbi is leaving our company on 15 June 2026 at the end of the internship.

Braunschweig, 15 June 2026

On behalf of

Jessica Raschke
Head of Division Human Resources
Management
